AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application.

- 1-76. (Canceled)
- (Previously Presented) A method of acidizing a subterranean formation penetrated by a well bore comprising:

providing a permeability-modifying aqueous treatment fluid comprising

a relative permeability modifier comprising a hydrophobically modified water-soluble polymer that comprises polar heteroatoms within the polymer backbone, wherein the hydrophobically modified water-soluble polymer reduces the permeability of the subterranean formation to an aqueous-based fluid;

providing an acidizing treatment fluid;

injecting the permeability-modifying aqueous treatment fluid into the subterranean formation; and

injecting the acidizing treatment fluid into the subterranean formation.

- 78. (Original) The method of claim 77 wherein the permeability-modifying aqueous treatment fluid further comprises an aqueous-based fluid.
- 79. (Original) The method of claim 77 wherein the relative permeability modifier reduces the permeability of the treated zone of the subterranean formation to aqueous-based fluids, thereby diverting the acidizing treatment fluid to other zones of the subterranean formation.
- (Original) The method of claim 77 wherein the relative permeability modifier has a molecular weight in the range of from about 100,000 to about 10,000,000.
- 81. (Previously Presented) The method of claim 77 wherein the polar heteroatoms present within the polymer backbone of the hydrophobically modified water-soluble polymer are selected from the group consisting of oxygen, nitrogen, sulfur, and phosphorous.
- 82. (Original) The method of claim 77 wherein the hydrophobically modified water-soluble polymer is present in the permeability-modifying aqueous treatment fluid in an amount in the range of from about 0.02% to about 10% by weight of the permeability-modifying aqueous treatment fluid.

- 83. (Original) The method of claim 77 wherein the hydrophobically modified water-soluble polymer is a reaction product of a hydrophilic polymer that comprises a polymer backbone comprising polar heteroatoms and a hydrophobic compound.
- 84. (Previously Presented) The method of claim 83 wherein the hydrophilic polymer is selected from the group consisting of a cellulose, a polyamide, a polyetheramine, a polyhydroxyetheramine, a polysulfone, and a starch.
- 85. (Original) The method of claim 84 wherein the starch comprises a cationic starch.
- 86. (Previously Presented) The method of claim 83 wherein the hydrophobic compound is selected from the group consisting of an alkyl halide, a sulfonate, a sulfate, and an organic acid derivative.
- 87. (Previously Presented) The method of claim 86 wherein the organic acid derivative is selected from the group consisting of an octenyl succinic acid; a dodecenyl succinic acid; and an anhydride, ester, or amide of octenyl succinic acid or dodecenyl succinic acid.
- 88. (Original) The method of claim 83 wherein the hydrophobic compound has an alkyl chain length of from about 4 to about 22 carbons.

- 104. (Canceled)
- 105. (Canceled)
- 106. (Canceled)
- 107. (Original) The method of claim 77 wherein the permeability-modifying aqueous treatment fluid further comprises a gelling agent.
- 108. (Original) The method of claim 107 wherein the permeability-modifying aqueous treatment fluid further comprises proppant.
- 109. (Original) The method of claim 77 wherein the permeability-modifying aqueous treatment fluid is injected into the subterranean formation at a pressure sufficient to create or enhance at least one fracture therein.
- 110. (Original) The method of claim 77 wherein the acidizing treatment fluid is injected into the subterranean formation at a pressure sufficient to create or enhance at least one fracture therein.
- 111. (Original) The method of claim 77 wherein the permeability-modifying aqueous treatment fluid is injected into the subterranean formation prior to the acidizing treatment fluid.
- 112. (Original) The method of claim 77 wherein the permeability-modifying aqueous treatment fluid is injected into the subterranean formation simultaneously with the acidizing treatment fluid.
 - 113-186. (Canceled)
- 187. (Previously Presented) A method of acidizing a subterranean formation penetrated by a well bore comprising:

providing a permeability-modifying aqueous treatment fluid comprising

a relative permeability modifier comprising a hydrophobically modified water-soluble polymer that comprises polar heteroatoms within the polymer backbone, wherein the hydrophobically modified water-soluble polymer reduces the permeability of the subterranean formation zone to an aqueous-based fluid:

providing an acidizing treatment fluid;

injecting the permeability-modifying aqueous treatment fluid into the subterranean formation zone; and

injecting the acidizing treatment fluid into the subterranean formation zone so that the hydrophobically modified water-soluble polymer present in the subterranean formation diverts the acidizing treatment fluid to another subterranean formation zone.

- 188. (Previously Presented) The method of claim 187 wherein the permeability-modifying aqueous treatment fluid further comprises an aqueous-based fluid.
- 189. (Previously Presented) The method of claim 187 wherein the relative permeability modifier has a molecular weight in the range of from about 100,000 to about 10,000,000.
- 190. (Previously Presented) The method of claim 187 wherein the polar heteroatoms present within the polymer backbone of the hydrophobically modified water-soluble polymer are selected from the group consisting of oxygen, nitrogen, sulfur, and phosphorous.
- 191. (Previously Presented) The method of claim 187 wherein the hydrophobically modified water-soluble polymer is present in the permeability-modifying aqueous treatment fluid in an amount in the range of from about 0.02% to about 10% by weight of the permeability-modifying aqueous treatment fluid.
- 192. (Previously Presented) The method of claim 187 wherein the hydrophobically modified water-soluble polymer is a reaction product of a hydrophilic polymer that comprises a polymer backbone comprising polar heteroatoms and a hydrophobic compound.
- 193. (Previously Presented) The method of claim 192 wherein the hydrophilic polymer is selected from the group consisting of a cellulose, a polyamide, a polyetheramine, a polyhydroxyetheramine, a polysulfone, and a starch.
- 194. (Previously Presented) The method of claim 193 wherein the starch comprises a cationic starch.
- 195. (Previously Presented) The method of claim 192 wherein the hydrophobic compound is selected from the group consisting of an alkyl halide, a sulfonate, a sulfate, and an organic acid derivative.
- 196. (Previously Presented) The method of claim 195 wherein the organic acid derivative is selected from the group consisting of an octenyl succinic acid; a dodecenyl succinic acid; and an anhydride, ester, or amide of octenyl succinic acid or dodecenyl succinic acid.
- 197. (Previously Presented) The method of claim 192 wherein the hydrophobic compound has an alkyl chain length of from about 4 to about 22 carbons.

- 198. (Previously Presented) The method of claim 187 wherein the permeability-modifying aqueous treatment fluid further comprises a gelling agent.
- 199. (Previously Presented) The method of claim 198 wherein the permeability-modifying aqueous treatment fluid further comprises proppant.
- 200. (Previously Presented) The method of claim 187 wherein the permeability-modifying aqueous treatment fluid is injected into the subterranean formation at a pressure sufficient to create or enhance at least one fracture therein.
- 201. (Previously Presented) The method of claim 187 wherein the acidizing treatment fluid is injected into the subterranean formation at a pressure sufficient to create or enhance at least one fracture therein
- 202. (Previously Presented) The method of claim 187 wherein the permeability-modifying aqueous treatment fluid is injected into the subterranean formation prior to the acidizing treatment fluid.
- 203. (Previously Presented) The method of claim 187 wherein the permeability-modifying aqueous treatment fluid is injected into the subterranean formation simultaneously with the acidizing treatment fluid.
